

Flat fan air nozzle with internal-mixing suction-gravity system

Characteristics

The nozzle combination's slotted outlet opening results in a flat fan spray pattern. Its form remains fixed until C. Turbulences follow. A, B and C represent the spray widths for designated distances. Distance E constitutes the fluid mist's complete length until the spray pattern dissolves.

Connection 1/8"
 Connection 1/4"
 For functions see page 10.1 - 10.2
 For dimensions and adjustment see page 10.3 - 10.4

Liquid is sucked in by air/gas flow or led in by gravity.

Output water (l/h) - Air required (NI/min.)

Nozzle pairs	Air		Water							Spray pattern dimensions					
	Pressure (p)	Flow (NI/min.)	Intake height			Suction height				Air pressure (bar)	A 15 cm	B 23 cm	C 38 cm	E max (m)	
			45 cm	30 cm	15 cm	10 cm	20 cm	30 cm	60 cm						90 cm

Binary Nozzle Z-SRA

Round spray air nozzle with external-mixing suction-gravity system

Characteristics

Air/gas and liquid are guided separately into the nozzle and mix externally. The resulting air/gas negative pressure causes the liquid to be sucked in and atomized. The result is a round spray pattern. Its form remains fixed until C. Turbulences follow. A, B and C represent the spray widths for designated distances. Dimension E constitutes the fluid mist's complete length until the spray pattern dissolves.
